

“GS-1” Rate
Single-Phase General Service
Effective September, 2015
211, 411

Availability

This rate is available for all single-phase non-residential and general power uses.

Character of Service

The type of service rendered under this rate schedule shall be alternating current, sixty (60) Hertz, single-phase at standard 120/240 voltage.

Rate -- Monthly

Facilities Charge	\$25.00 per month
Energy Charge	
First 500 kilowatt-hour usage per month	\$.1220 per KWH
Next 1000 kilowatt-hour usage per month	\$.1057 per KWH
All over 1,500 kilowatt-hours usage per month	\$.0895 per KWH

Minimum Monthly Charge

- The minimum monthly charge shall be the Facility Charge, or
- A minimum transformer capacity charge (KVA minimum) of \$2.00 per month for each KVA or fractional KVA of transformer capacity that is installed to serve this load. While this is a monthly charge, it shall be deferred until the true-up that may occur in December of each year or at time of final billing. In December of each year, the deferred monthly KVA charges will be compared to actual energy usage, applicable demand charges, and facility charges. If at time of true-up, the total of monthly KVA charges is less than the actual revenue collected from energy charges, demand charges, and facility charges, a fee for the difference shall be added to that month’s bill. Contract Add-On payments will not count toward the total true-up revenue.

Conditions of Service

- This rate is available for all general service uses requiring transformer capacity of 100 KVA or less.
- Individual single-phase electric motors are limited to a maximum of 10 horsepower, unless approved by Heartland REMC.

- This is not a stand-by or supplemental rate. When a renewable energy generation system of 10 KW or larger is interconnected with this meter, this rate does not apply.
- This rate requires continuous service. Where the electrical load is not deemed “primarily seasonal” by Heartland REMC, and the account is disconnected for less than 12 months, all minimum monthly charges avoided during the disconnected period, plus a re-connect trip charge, shall be paid prior to re-establishing the account in the same name or that of another family member.
- Should the electrical energy furnished under this rate schedule be metered on the primary side of the service transformer(s), Heartland REMC shall deduct 1½% of the total energy revenue for that billing month.
- This rate is applicable to the “Delivered” energy that flows from the grid to the member equipment. When a renewable energy generation resource is interconnected to the Heartland REMC electric system, this rate shall not apply to the “Received” energy that flows back onto the grid. Assuming that an interconnection agreement is in place, “Received” energy shall be paid at “Avoided Cost” which will be adjusted from time to time.

Wholesale Power Cost Adjustment

The above rates are subject to purchased power cost tracking adjustments as charged to Heartland REMC by its power supplier.
